

## Module 1

Name: PostDash

MVP Functionality:

- What type of food do you want?
- How much are you willing to pay?
- Filter by highest rating.
- Tip delivery driver.

User Stories:

Q: What user story might have prompted Post Dash to display all of the food options in that area?

1. As a consumer, I want to be able to filter through what food I want to have that day.

As a restaurant, we want users to be able to find our food by being able to search for exactly what type of food they are craving.

- Food Filter Option

Q: What user story might have prompted Post Dash to add a feature of how much you are willing to spend?

2. As a consumer, the option to have a filter on how much restaurants cost is important because some customers may have different budgets.

As a restaurant, we want customers to know how much they are roughly going to be paying without any surprises.

- Money Filter

Q: What user story might have prompted Post Dash to have an option to separate each restaurant by rating?

3. As a user it is always a nice option to look at a business's ratings to see how other customers view it.

As a restaurant, we have worked hard to get outstanding ratings from customers so we should be rewarded with being on the top of the list.

- Rating Filter

Q: What user story might have prompted Post Dash to have a tip driver option?

4. As a food industry worker, a lot of our payout comes from tips so it is a must have to have a tip option.

As a restaurant, it is important to all workers to receive a good tip, especially since they will be directly associated with our business.

- Tip driver option
